

1. Crear una gramática que genere los siguientes lenguajes:

- a) $\{ a, aa, aaa \}$
- b) $\{ a, aa, aaa, aaaa, aaaaa, \dots \}$
- c) $\{ \lambda, a, aa, aaa \}$
- d) $\{ \lambda, a, aa, aaa, aaaa, aaaaa, \dots \}$

2. Dadas las gramáticas $G=(\Sigma_T, \Sigma_{NT}, S, P_i)$ donde:

G_1	G_2	G_3	G_4	G_5
$\Sigma_T = \{c\}$ $\Sigma_{NT} = \{S, A\}$	$\Sigma_T = \{c, d\}$ $\Sigma_{NT} = \{S, A\}$	$\Sigma_T = \{c\}$ $\Sigma_{NT} = \{S, A\}$	$\Sigma_T = \{c, d\}$ $\Sigma_{NT} = \{S, A, T\}$	$\Sigma_T = \{c, d\}$ $\Sigma_{NT} = \{S, A\}$
$P_1: S \rightarrow \lambda \mid A$ $A \rightarrow AA \mid c$	$P_2: S \rightarrow \lambda \mid A$ $A \rightarrow cAd \mid cd$	$P_3: S \rightarrow \lambda \mid A$ $A \rightarrow AcA \mid c$	$P_4: S \rightarrow cA$ $A \rightarrow d \mid cA \mid Td$ $T \rightarrow Td \mid d$	$P_5: S \rightarrow \lambda \mid A$ $A \rightarrow Ad \mid cA \mid c \mid d$

Determinar el lenguaje asociado a dichas gramáticas.
